

Task Descriptions

The participant must complete the following 5 tasks. These tasks are designed to cover the core features of CeliMap and may reveal usability challenges.

Task 1: Account Registration & Allergy Profile Setup

You just heard from a friend that there is a new app called CeliMap that helps people with allergies find safe restaurants nearby. Since you have a gluten intolerance, this sounds very useful to you. Open the app and create a new account. Once you have registered, set up your allergy profile by selecting gluten as your primary allergy.

Task 2: Finding Allergen-Free Restaurants on the Map

Now that your profile is set up, you would like to find restaurants near your current location that offer gluten-free dishes. Use the map to find at least two restaurants that are suitable for you. Explore the available information about one of the restaurants.

Task 3: Filtering & Searching for a Specific Restaurant

A colleague recommended a restaurant called "Gruenberger" to you and mentioned that they have allergen-friendly options. Search for this specific restaurant in the app and check whether it offers dishes that are safe for your gluten intolerance.

Task 4: Navigating to a Restaurant

You have decided to visit one of the restaurants you found. Use the app to start the navigation to that restaurant so that you can find your way there from your current location.

Task 5: Adding a New Restaurant & Writing a Review

You recently visited a restaurant called "Cafe Sonnenschein" and noticed that they offer a great selection of allergen-free meals, but the restaurant is not yet listed in CeliMap. Add this restaurant to the app and write a brief review sharing your experience and the allergy-friendly options they offer.
